1) Install prerequisites (one-time)

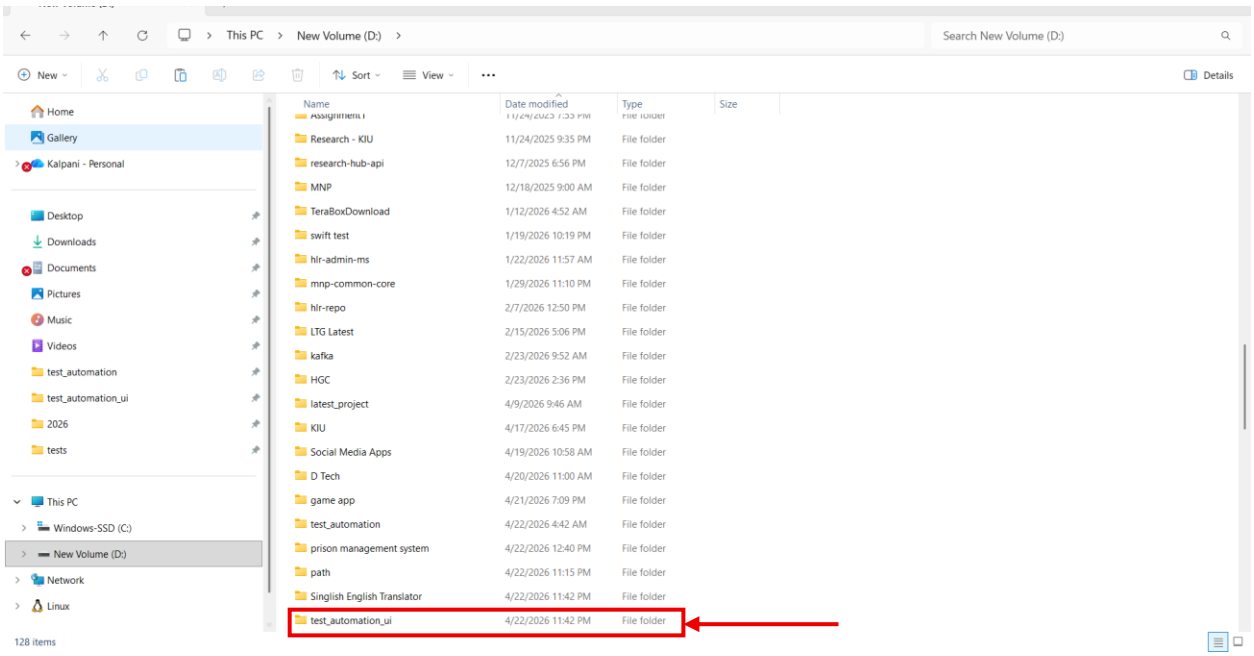
- Install Python 3.11/3.12

- Install Google Chrome (recommended) or let Playwright install Chromium

2) Set up the project environment

- Open the provided zip folder

- Save the ZIP file to your **D: drive** and extract it

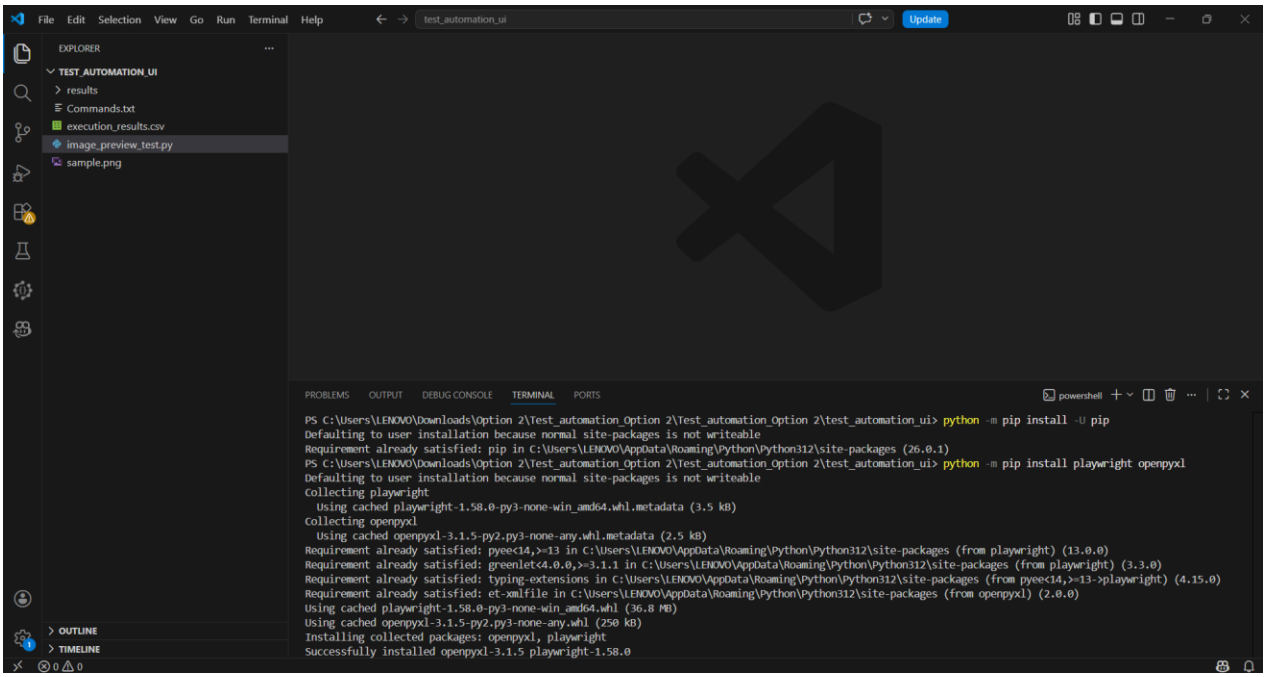


- Open the **Command Prompt**

- In **Command Prompt**, navigate to the **extracted** folder by typing the following command: **cd /d D:\test_automation_ui**

3) Install the required dependencies (one-time)

- From the current directory in **Command Prompt** (i.e., D:\test_automation_ui), run the following commands:
    - pip install -U pip
    - pip install playwright openpyxl
    - playwright install



4) Change the URL in code

- Open 'image_preview_test.py' file

- Find the following line in the code:

DEFAULT_URL = https://www.pixelssuite.com/image-to-pdf

- Change it as follows:

DEFAULT_URL = https://www.pixelssuite.com/convert-to-png

5) Save the Python file

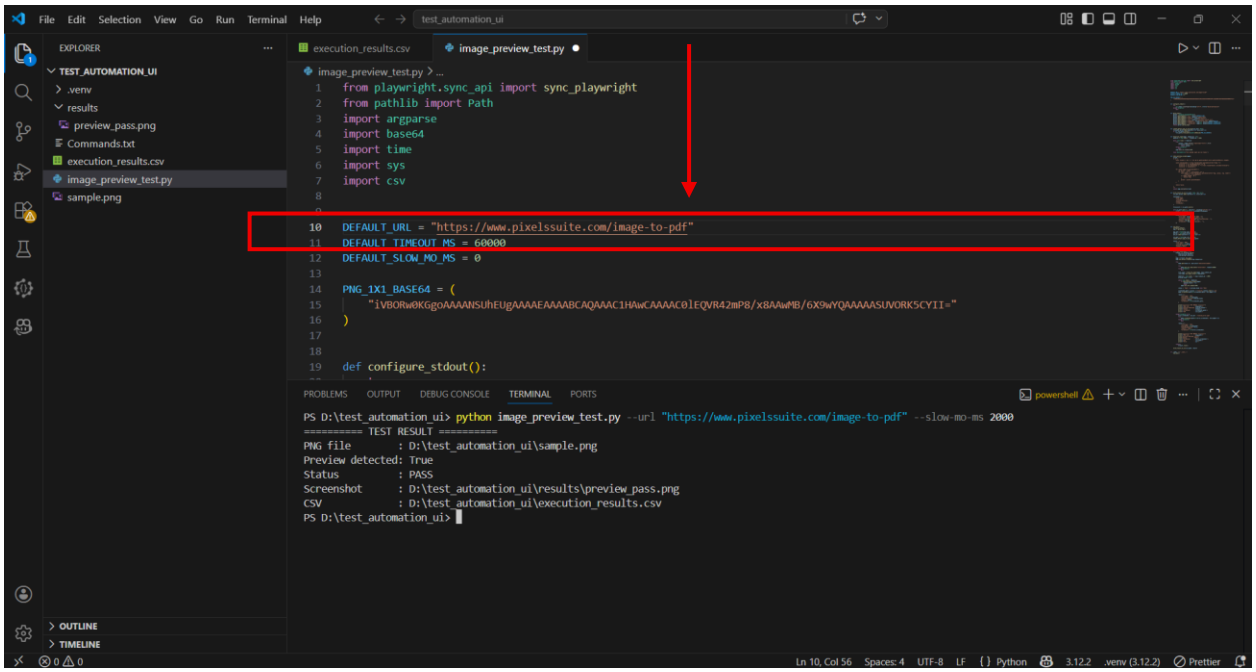
- After updating the 'DEFAULT_URL', make sure to save the Python file.

6) Run the Playwright script

- Go back to the Command Prompt

- From the current directory in Command Prompt (i.e., D:\test_automation_ui), run the following command:

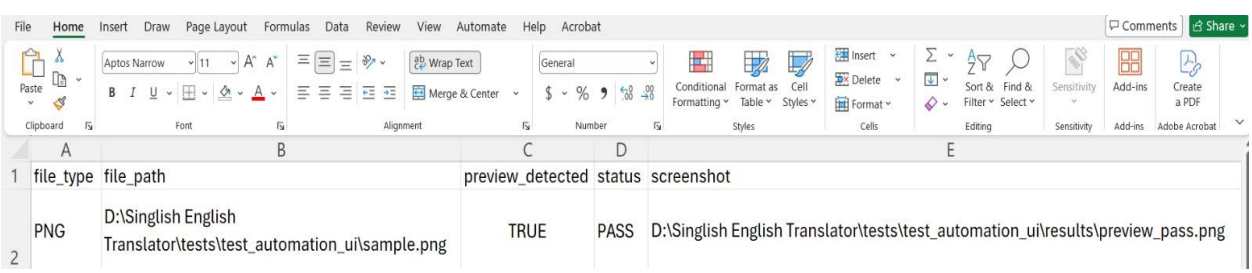
- python image_preview_test.py --url "https://www.pixelssuite.com/convert-to-png" --slow-mo-ms 2000

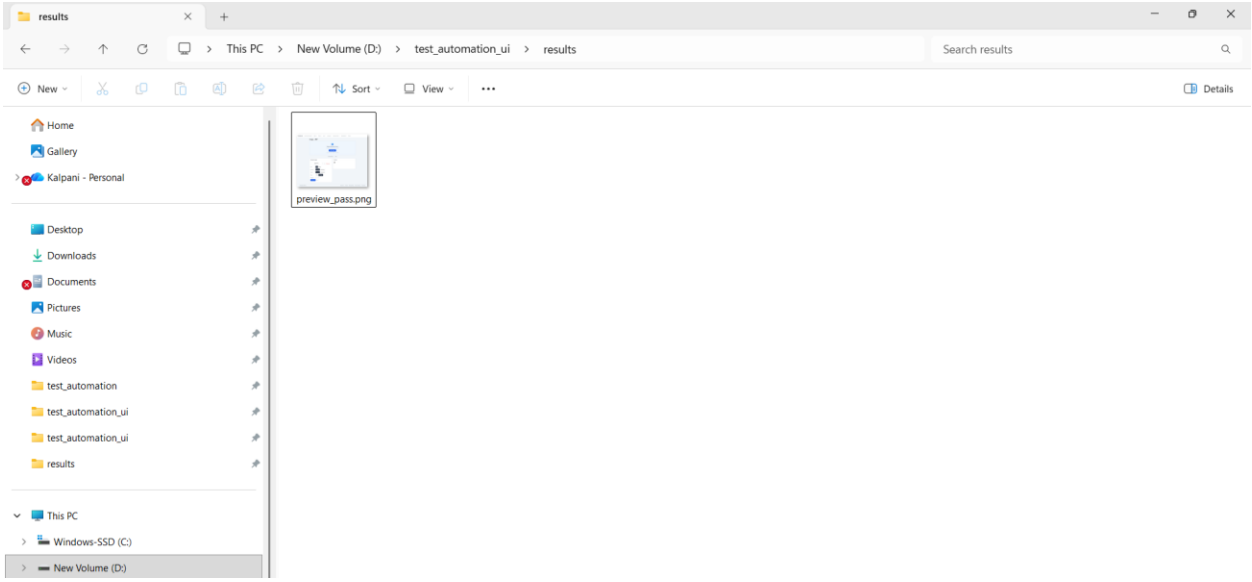


7) Check results

- Go to the 'test_automation_ui' folder

- Open the CSV file and verify that it contains one record. That is, as shown below, it should now have one data row in addition to the column headings.



file_type	file_path	preview_detected	status	screenshot
PNG	D:\Singlish English Translator\tests\test_automation_ui\sample.png	TRUE	PASS	D:\Singlish English Translator\tests\test_automation_ui\results\preview_pass.png


- Check whether the ‘result’ folder contains a PNG file named ‘preview_pass.png’
